

SIGNATUS — Electronic Signature

Sign documents by handwritten digital signature on a Samsung mobile device

Mobile

Leverage features of mobile devices and work even offline.

Secure

Samsung Knox™ guarantees military level security.

Lightweight

Server-free architecture facilitates deployment and scaling.

Engage Customers Anywhere

SIGNATUS enables legally binding documents to be signed at the point of sale or at a remote location. SIGNATUS also enables offline e-signing when connectivity is unavailable.

Mobile devices give you the freedom to engage customers wherever they are.

Collect and Protect All Important Data

SIGNATUS captures all customer data needed for complete onboarding, including signatures, pictures, ID scans, voiceprint, fingerprints, and GPS coordinates.

This information adds evidential weight that eliminates the risk of signature repudiation and ensures legal enforceability of e-signed documents.

Replace Old-Fashioned Signature Solutions

Samsung mobile devices with SIGNATUS can replace entire stack of hardware (including PC, signature pad, scanner, and printer) and software traditionally used for e-signing.

With Knox™ Customization, devices can be turned into single-purpose onboarding tools that can be used even in low-trust environments.

Use Cases

SIGNATUS fits all use cases where deployment of paperless workflows requires mediated (face-to-face) signatures—at a branch office, at the customer's doorstep, or anywhere on the go.

One **consumer credit provider** uses SIGNATUS to obtain customer signatures on credit contracts at third-party retail locations. Pictures of client IDs and proof of income captured by tablet camera accompany the signed contracts.

Private bankers use SIGNATUS to perform noncash banking and investment operations with affluent clients wherever and whenever they prefer.

A **telecom operator** uses SIGNATUS to sign onboarding documents delivered to the customers' doors by couriers using secured mobile devices. Telco services are activated or upgraded minutes after signatures are obtained without having to send or bring in paper documents for scanning and archiving.

Mobile sales reps use SIGNATUS to close contracts directly at customer locations, saving time and eliminating physical paperwork.

Benefits For Your Business

Time Savings and Increased Productivity

SIGNATUS enables faster service and measurably increases customer satisfaction.

By making manual paper handling unnecessary, our technology saves resources and frees up more time to spend with customers.

Fewer Errors and No Lost Documents

The business logic checks embedded in the SIGNATUS workflow eliminate incomplete or inaccurate documents.

The fully digital lifecycle of documents prevents loss and facilitates long-term archiving and retrieval.

Ultimate Customer Experience

Handwritten signatures are the most intuitive and user-friendly way of expressing one's consent.

Flexible user interface of SIGNATUS enables fully personalized workflows and provides a seamless user experience.

Standards

Legal

The SIGNATUS solution uses industry-accepted standards (PAdES) in accordance with US and EU legislation (UETA, EU Regulation No 910/2014).

In connection with a Trust Service Provider SIGNATUS can add to documents qualified electronic signatures, seals or timestamps.

Authenticity and Integrity

SIGNATUS adds dynamic characteristics (biometry) to handwritten signatures that link the signatory to the document content.

Data captured by SIGNATUS is hashed and encrypted within the PDF to provide proof of authenticity. Digital signature technology detects any attempts to alter signed documents.

Integration

Standard connectors for document retrieval and upload (REST, CMIS, web) make SIGNATUS easy to link with any applications that fulfill business-process objectives.

Our partner-friendly approach provides multiple ways of integrating SIGNATUS with other apps, platforms, solutions.
