

Dragon wing template

This template is a useful guide for the flap on the dragon handbag (see facebook live 6th Feb 2019)

Of course you could draw your own too. Once you bag is carved and covered measure across the top of the bag to get your straight edge (above) and then draw a curved line . For the end of the wing detail use a circle cutter to draw round.

Don't forget, the wing doesn't have to face this way - you can flip the design to have the small cut out curves facing the other way if you wish.

once you're happy your wing fits, cut it out and use it as a template on the sugar paste or chocolate paste . Keep it for future reference .
